EDUCATION

University of Georgia

Bachelor of Science, Computer Science

Athens, GA

August 2024 - Present

Clemson University

Bachelor of Engineering, Computer Engineering

Clemson, SC

August 2023 - May 2024

SKILLS

Technical: Network Security, System administration, Security Monitoring, Threat detection and response, Incident response and handling, Risk assessment, Access control, Cryptography, Security policies, Forensics, Cyberthreat Intelligence, Cloud Security, Web Exploitation, Version Control, HTTP, HTTPS, Database Management, TCP/IP, Port Forwarding, IDOR, XSS, API Testing, Penetration Testing

Programming Languages: Python, Java, MATLAB, R Project, SQL, C

Frameworks & Tools: Excel, Linux, MITRE ATT&CK, OpenCTI, NIST CSF, Wireshark, SIEM, Burp Suite, Ghidra, Splunk, Blender 3D, Docker, Github, Unity, ESP32

Certifications: Google Cybersecurity, CCSMM (Community Cyber Security Maturity Model), Security+ (In Progress)

PROJECT EXPERIENCE

Firmware Zero-Day Pipeline, Automated Vulnerability Research August 2026 - Present

- Developing an automated, LLM-powered firmware analysis pipeline on a self-hosted server that surfaces candidate zero-day vulnerabilities for human review, combining static and dynamic analysis with LLM-driven triage.
- Designed the review stage so every LLM-flagged finding is validated by a human before disclosure, keeping automated throughput while avoiding false-positive noise common in unsupervised vulnerability scanning.

Minecraft Home Lab Server with SIEM Integration

- Deployed a Linux-based Minecraft server with secure user authentication.
- Implemented automated server lifecycle management and resource optimization.
- Integrated Wazuh SIEM for real-time network, system, and log monitoring.

UGAhacks 11 Hackathon Project - Flying Broom Flight Controller

- Worked collaboratively with a team to create a flying broomstick for a magic themed hackathon within a 36-hour constraint.
- Developed flight control software using two ESP32 microcontrollers.
- Implemented peer-to-peer communication to transmit joystick input data in real time.

INVOLVEMENT EXPERIENCE

TheHackPack (University of Georgia) - Event Coordinator Officer

- Identify and register the club for regional and national cybersecurity competitions (CTFs, NCL, etc.), coordinating team formation and logistics.
- Competed in CTF competitions including NCAE (28/30 flags, 4th place), Hack The Madness (8th Place), and placed top 500 nationally in the NCL individual competition.
- Participated in a live blue team exercise defending a simulated hospital network, analyzing alerts and executing incident response procedures under time pressure.

Game Builders Club (University of Georgia) - Projects Officer

- Led game development teams by organizing members into project groups and appointing team leads to guide builds from concept to completion.
- Oversaw the club's core game development activity, managing team progress and ensuring projects were delivered successfully throughout the semester.
- Collaborated with club members to develop a Unity game prototype, creating 3D assets in Blender and helped implement core gameplay systems.

WORK EXPERIENCE

Student Assistant

Oglethorpe Dining Commons Oct 2024 - Present

- Supported daily operations in a high-volume dining facility serving 300+ students.
- Ensured compliance with food safety standards and cleanliness, contributing to high customer satisfaction.
- Assisted in team coordination to improve efficiency and service flow.
