EDUCATION

University of Georgia Athens, GA

B.S. in Computer Science *Aug. 2024 – Expected Aug. 2027*

- *Directed Study (Spring 2027):* Malware Reverse Engineering with Ghidra and debugging tools, faculty-advised.

TECHNICAL SKILLS

Security Operations: Network Security, Security Monitoring, Threat Detection and Response, Incident Response and Handling, Risk Assessment, Access Control, Security Policies, Forensics, Cyber Threat Intelligence, Cloud Security, Reverse Engineering
Offensive Security: Penetration Testing, Web Exploitation, API Testing, IDOR, XSS
Security Tools & Frameworks: Wazuh, Security Information and Event Management (SIEM), Splunk, Wireshark, Burp Suite, Ghidra, OpenCTI, MITRE ATT&CK, NIST CSF
Systems & Networking: Linux, System Administration, Docker, Database Management
Languages: Python, C, Java, SQL, MATLAB, R
Development & Other: Git, Version Control, ESP32, Unity, Blender 3D, Excel
Certifications: Google Cybersecurity Certificate, CCSMM (Community Cyber Security Maturity Model)

PROJECTS

Flying Broom Flight Controller – UGAHacks 11 | *ESP32, embedded systems*

- Built a flying broomstick within a team of three people for a magic-themed hackathon.
- Developed flight control software on two ESP32 microcontrollers, implementing peer-to-peer communication to transmit joystick input in real time.

Home Lab: Minecraft Management Dashboard + Wazuh SIEM | *Python, Flask, Docker, Wazuh*

- Built a Flask web dashboard to manage a Dockerized Minecraft server, controlling start/stop/restart, live log streaming, player whitelist, and timestamped world backups through the Docker SDK and RCON.
- Kept the dashboard bound to localhost and exposed only the game port (25565) through a tunnel, with hashed-password auth and login rate limiting, so server controls were never reachable from the public internet.
- Wrote custom Wazuh decoders and rules against server and dashboard logs to alert on brute-force logins, non-whitelisted join attempts, and server crashes, verifying each by triggering it live.

WORK EXPERIENCE

Advanced Research in Exploitation & Security Aug. 2026 – Present

Undergraduate Research | ares-uga.github.io/ARES-Website

- Contributing to an offline firmware vulnerability research pipeline (Python) that takes authorized device images through static analysis, QEMU emulation, and local-LLM triage inside a no-egress sandbox, with provenance and hashing recorded for every image.
- Helped design the reporting gate so a lead becomes a reported finding only after a demonstrated exploit, an independent refutation attempt, and human approval, cutting the false positives common in automated scanning.

Oglethorpe Dining Commons, University of Georgia Oct. 2024 – Present

Student Assistant

- Supported daily operations in a high-volume dining facility serving 300+ students.
- Ensured compliance with food safety standards and cleanliness, contributing to high customer satisfaction.

LEADERSHIP EXPERIENCE

TheHackPack, University of Georgia Cybersecurity Club

Competition Director

- Coordinated team formation and registration for 9+ regional and national cybersecurity competitions.
- Led workshops on beginner and advanced web exploitation for 50+ members.
- Participated in a live blue team exercise defending a simulated hospital network, analyzing alerts and executing incident response procedures under time pressure.

Game Builders Club, University of Georgia

Projects Officer

- Designed a member intake survey capturing skill ratings across 6 disciplines (programming, 2D/3D art, music, sound design, writing) and preference rankings for 8 game pitches.
- Assigned 40 members to 8 cross-functional development teams, balancing each team's role coverage against members' top-ranked projects and multi-team availability.

AWARDS

CSAW CTF Qualifications – 3rd Place (2026)
Hack The Madness – 8th Place (2026)
Raymond James CTF – 9th Place (2026)
NCAE Cyber Games – 4th Place, 28/30 Flags (2026)
National Cyber League – Top 500 Nationally, Individual (2025)
