EDUCATION

University of Georgia
B.S. in Computer Science

Athens, GA
Aug. 2024 – Present

TECHNICAL SKILLS

Security Operations: Network Security, Security Monitoring, Threat Detection and Response, Incident Response and Handling, Risk Assessment, Access Control, Security Policies, Forensics, Cyber Threat Intelligence, Cloud Security
Offensive Security: Penetration Testing, Web Exploitation, API Testing, IDOR, XSS
Security Tools & Frameworks: Wazuh, Security Information and Event Management (SIEM), Splunk, Wireshark, Burp Suite, Ghidra, OpenCTI, MITRE ATT&CK, NIST CSF
Systems & Networking: Linux, System Administration, Docker, TCP/IP, HTTP/HTTPS, Port Forwarding, Database Management
Languages: Python, C, Java, SQL, MATLAB, R
Development & Other: Git, GitHub, Version Control, ESP32, Unity, Blender 3D, Excel
Certifications: Google Cybersecurity Certificate, CCSMM (Community Cyber Security Maturity Model), CompTIA Security+ (In Progress)

PROJECTS

Linux Home Lab with Wazuh SIEM Monitoring | *Linux, Wazuh, Docker*

- Integrated Wazuh SIEM for real-time network, system, and log monitoring of a self-hosted Linux server.
- Deployed a Linux-based Minecraft server with secure user authentication as the monitored workload.
- Implemented automated server lifecycle management and resource optimization.

Flying Broom Flight Controller – UGAHacks 11 | *ESP32, embedded systems*

- Built a flying broomstick within a team of three people for a magic-themed hackathon.
- Developed flight control software on two ESP32 microcontrollers, implementing peer-to-peer communication to transmit joystick input in real time.

LEADERSHIP & COMPETITIONS

TheHackPack, University of Georgia Cybersecurity Club

Competition Director

- Competed in CTFs including CSAW Qualifications (3rd place), NCAE (28/30 flags, 4th place), and Hack The Madness (8th place); placed in the top 500 nationally in the NCL individual competition.
- Identify and register the club for regional and national cybersecurity competitions (CTFs, NCL, and others), coordinating team formation and logistics.
- Lead workshops on beginner and advanced web exploitation using browser developer tools and Burp Suite.
- Participated in a live blue team exercise defending a simulated hospital network, analyzing alerts and executing incident response procedures under time pressure.

Game Builders Club, University of Georgia

Projects Officer

- Lead game development teams by organizing members into project groups and appointing team leads to guide builds from concept to completion, tracking progress across the semester.
- Collaborated on a Unity game prototype, creating 3D assets in Blender and helping implement core gameplay systems.

WORK EXPERIENCE

Advanced Research in Exploitation & Security

Aug. 2026 - Present

Undergraduate Research | ares-uga.github.io/ARES-Website

- Developing an automated, LLM-powered firmware analysis pipeline on a self-hosted server that surfaces candidate zero-day vulnerabilities for human review, combining static and dynamic analysis with LLM-driven triage.
- Designed the review stage so every LLM-flagged finding is validated by a human before disclosure, keeping automated throughput while avoiding the false-positive noise common in unsupervised vulnerability scanning.

Oglethorpe Dining Commons, University of Georgia

Oct. 2024 - Present

Student Assistant

- Supported daily operations in a high-volume dining facility serving 300+ students.
- Ensured compliance with food safety standards and cleanliness, contributing to high customer satisfaction.
- Assisted in team coordination to improve efficiency and service flow.
